### Legal Recovery

Manage the progression of cases through all stages of the legal recovery process using CARS Legal facilities.

Diary Entries The daily workflow of individuals and teams is coordinated by both automated and individually created diary entries.

## **Corporate Arrears Recovery**

The CARS system has been designed to;

- Focus on Case Management at a Corporate Level
- Be independent of Back Office Systems
- Take a Citizens view of related accounts
- Provide a platform for Shared Services within and across organisations
- Avoid duplication of recovery effort across organisations
- Provide cost effective and more efficient arrears management
- Incorporate appropriate advice and support activity

### Merchant Software Limited

Merchant Software Limited is an independent software company which has extensive experience and expertise of working with local authority, registered social landlords, commercial and central government organisations

The approach that the company has adopted is to work in partnership with clientsin order to build long term relationships which will mutually benefit each organisation.

The company's experienced staff are focused on ensuring that all aspects of installation, commissioning and after sales support are handled to our cleints satisfaction.

Merchant Software Limited is TickIT accredited

Details of the Corporate Arrears Recovery System, and our other products, can be found on our website www.merchantsoftware.co.u

### System Requirements

Corporate Arrears Recovey System (CARS) is a thin client application which runs on a wide range of hardware platforms. The system has been designed to operate over a Wide Area Network (WAN) or can be used in a Citrix environment.

The CARS client application can be installed on PC's operating under Windows NT, XP, Vista and Windows 7. The CARS application services run on a Windows 2000/2003 server.

The underlying database server is SQL Server which will also operate on a Windows 2000/2003 server.

"An innovative solution for arrears management which can transform the approach taken to managing arrears cases"

# joined up thinking.

# **Corporate Arrears Recovery System**

CARS

The CARS system is an innovative solution, unique in the marketplace, which, by adopting a corporate approach to arrears management, eliminates the huge problems currently associated with managing and recovering multiple debts for the same debtors spread across different departments and systems.

Unique Corporate Approach

Focused on Case Management at a Corporate level incorporating both current details, essential for case management, in addition to historic debt details across all debt types.

Systems Independence and Integration

Back Office independence is a feature of CARS which ensures that it can be deployed in any situation regardless of the different combinations

of back office systems

that information is

Back Office system

integration can be

very expensive but

CARS overcomes this issue by providing an

in built capability to

relevant information

from the necessary

back office systems required at each site.

retrieve, transform

and update all

retrieved from.

**Citizen Focus** 

Consolidation of account details from all back office systems provides a Citizen's view of related accounts which allows these to be managed as a single case.

### **Enabling Shared** Services

Overcoming the issues of poor communication between traditional 'Silo' back office systems, CARS provides the common platform that enables shared services to be adopted both within the organisation and across different organisations regardless of location.

### Payment Distributiuon

Rather than Citizens having to make complicated payment arrangements for each different debt type, a single agreed payment can be made to CARS which will distribute the payment, as agreed, to each source system. This

significantly reduces the number of payments to be processed and greatly simplifies the payments requested from Citizens.

### **Benefit & Money** Advice Inclusion

Ensuring that Citizens are provided the appropriate advice for both benefit entitlement and also money advice is essential in reducing levels of debt. CARS enables benefits and money advice departnents and agencies to become involved and have cases referred directly to them.

### Management Information

Management cases, substantially decisions on strategy, reduces the level of manual resources resources and funding required to manage require accurate understanding of the caseloads. These significant efficiency caseload. CARS case management gains release approach provides resources that can be the information and applied to improving performance in other business intelligence required to make areas. those decisions with confidence, without interrogating each individual source system.

features of CARS.

combined with the

consolidation of

Reducina Avoidable Contact

Managing communications on a Citizen basis significantly reduces the number of contacts by letter, phone and visit, traditionally required by each different

department involved.

### Automated Direct Deductions Request

Ordinarily very time consuming, CARS automates the direct deduction request process, identifying eligible cases that are in arrears for which no deductions are being received, and submits a DWP request for attachment of benefit.

### **Technical Arrear** Indentification

CARS identifies and separates technical arrears due to benefit payments, from the actual arrears that tenants are due to pay. This greatly simplifies the management of arrears and enables management to have a clear view of arrears outstanding, broken down into actual and technical.

### Partner Referrals

**Closer co-operation** between organisations and their external agents is enabled by the option within CARS for third parties to have access to cases that have been referred for their attention. This can be external recovery agents, advice agencies, bailiffs or sheriff officers.
